PROBLEM STATEMENT AND DEFINITION

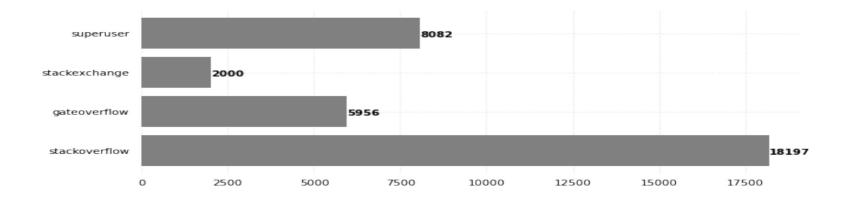

TO FIND SEMANTICALLY SIMILAR QUESTIONS TO GIVEN QUESTION AND RANK THEM.

Given a question q, Identify Questions in the corpus that are similar and related to this Question semantically.

DATASET USED

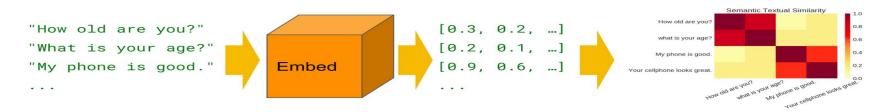

Source	Description
StackExchange	Network of various Q&A websites
StackOverflow	Features Q&A on topics in computer programming.
GateOverflow	Q&A on GATE Question
SuperUser	Q&A site for computer enthusiasts.

Table 1: Showing Sources of Datasets we have used.

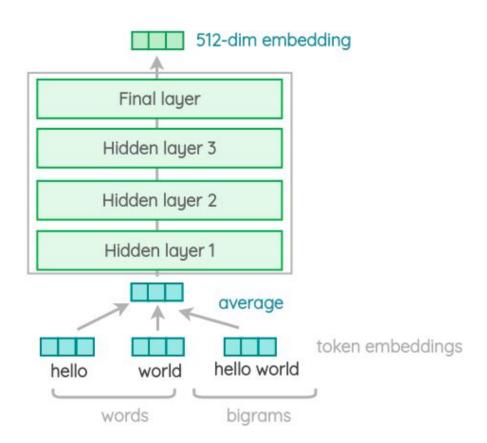

OVERALL IDEA ABOUT PROJECT

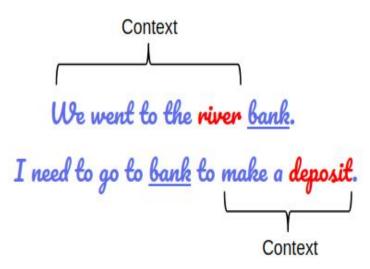

- WE WILL MEASURE THE SIMILARITY BETWEEN QUESTIONS BASED ON THE SEMANTIC.
- THIS TYPE OF SIMILARITY IS OFTEN COMPUTED BY FIRST EMBEDDING THE TWO TEXTS AND THEN COMPUTING THE COSINE SIMILARITY BETWEEN THEM.

Sentence similarity is typically calculated by first embedding the sentences and then taking the cosine similarity between them. (Source)

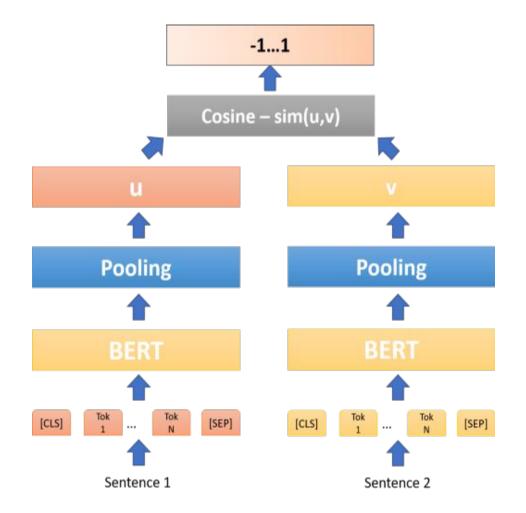

USE Model

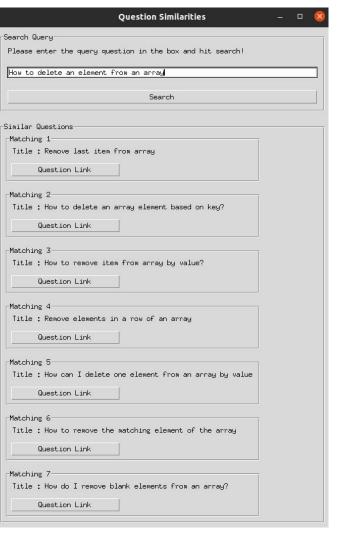

BERT Model

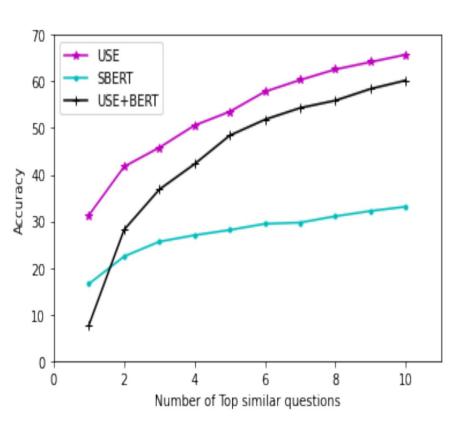

SBERT Model

RESULTS

ACCURACY

CONCLUSIONS

- Predicted top 7 similar questions for any given user query with an accuracy of 60%.
- Learnt that there is a lot of data available freely which can be put to good use.
- Preservation of semantic meaning of the sentence is of vital importance.
- Trial and experimentation is important to get the technique that best fits the given task and dataset.
- Important to have a balance between performance and user experience.
- Appreciation for people who have developed state-of-the-art techniques.

THANK YOU!
